

COVID-19 Total Deaths between 2021 and 2022 in Europe

Dhafer Malouche

Total COVID-19 Deaths in 2021

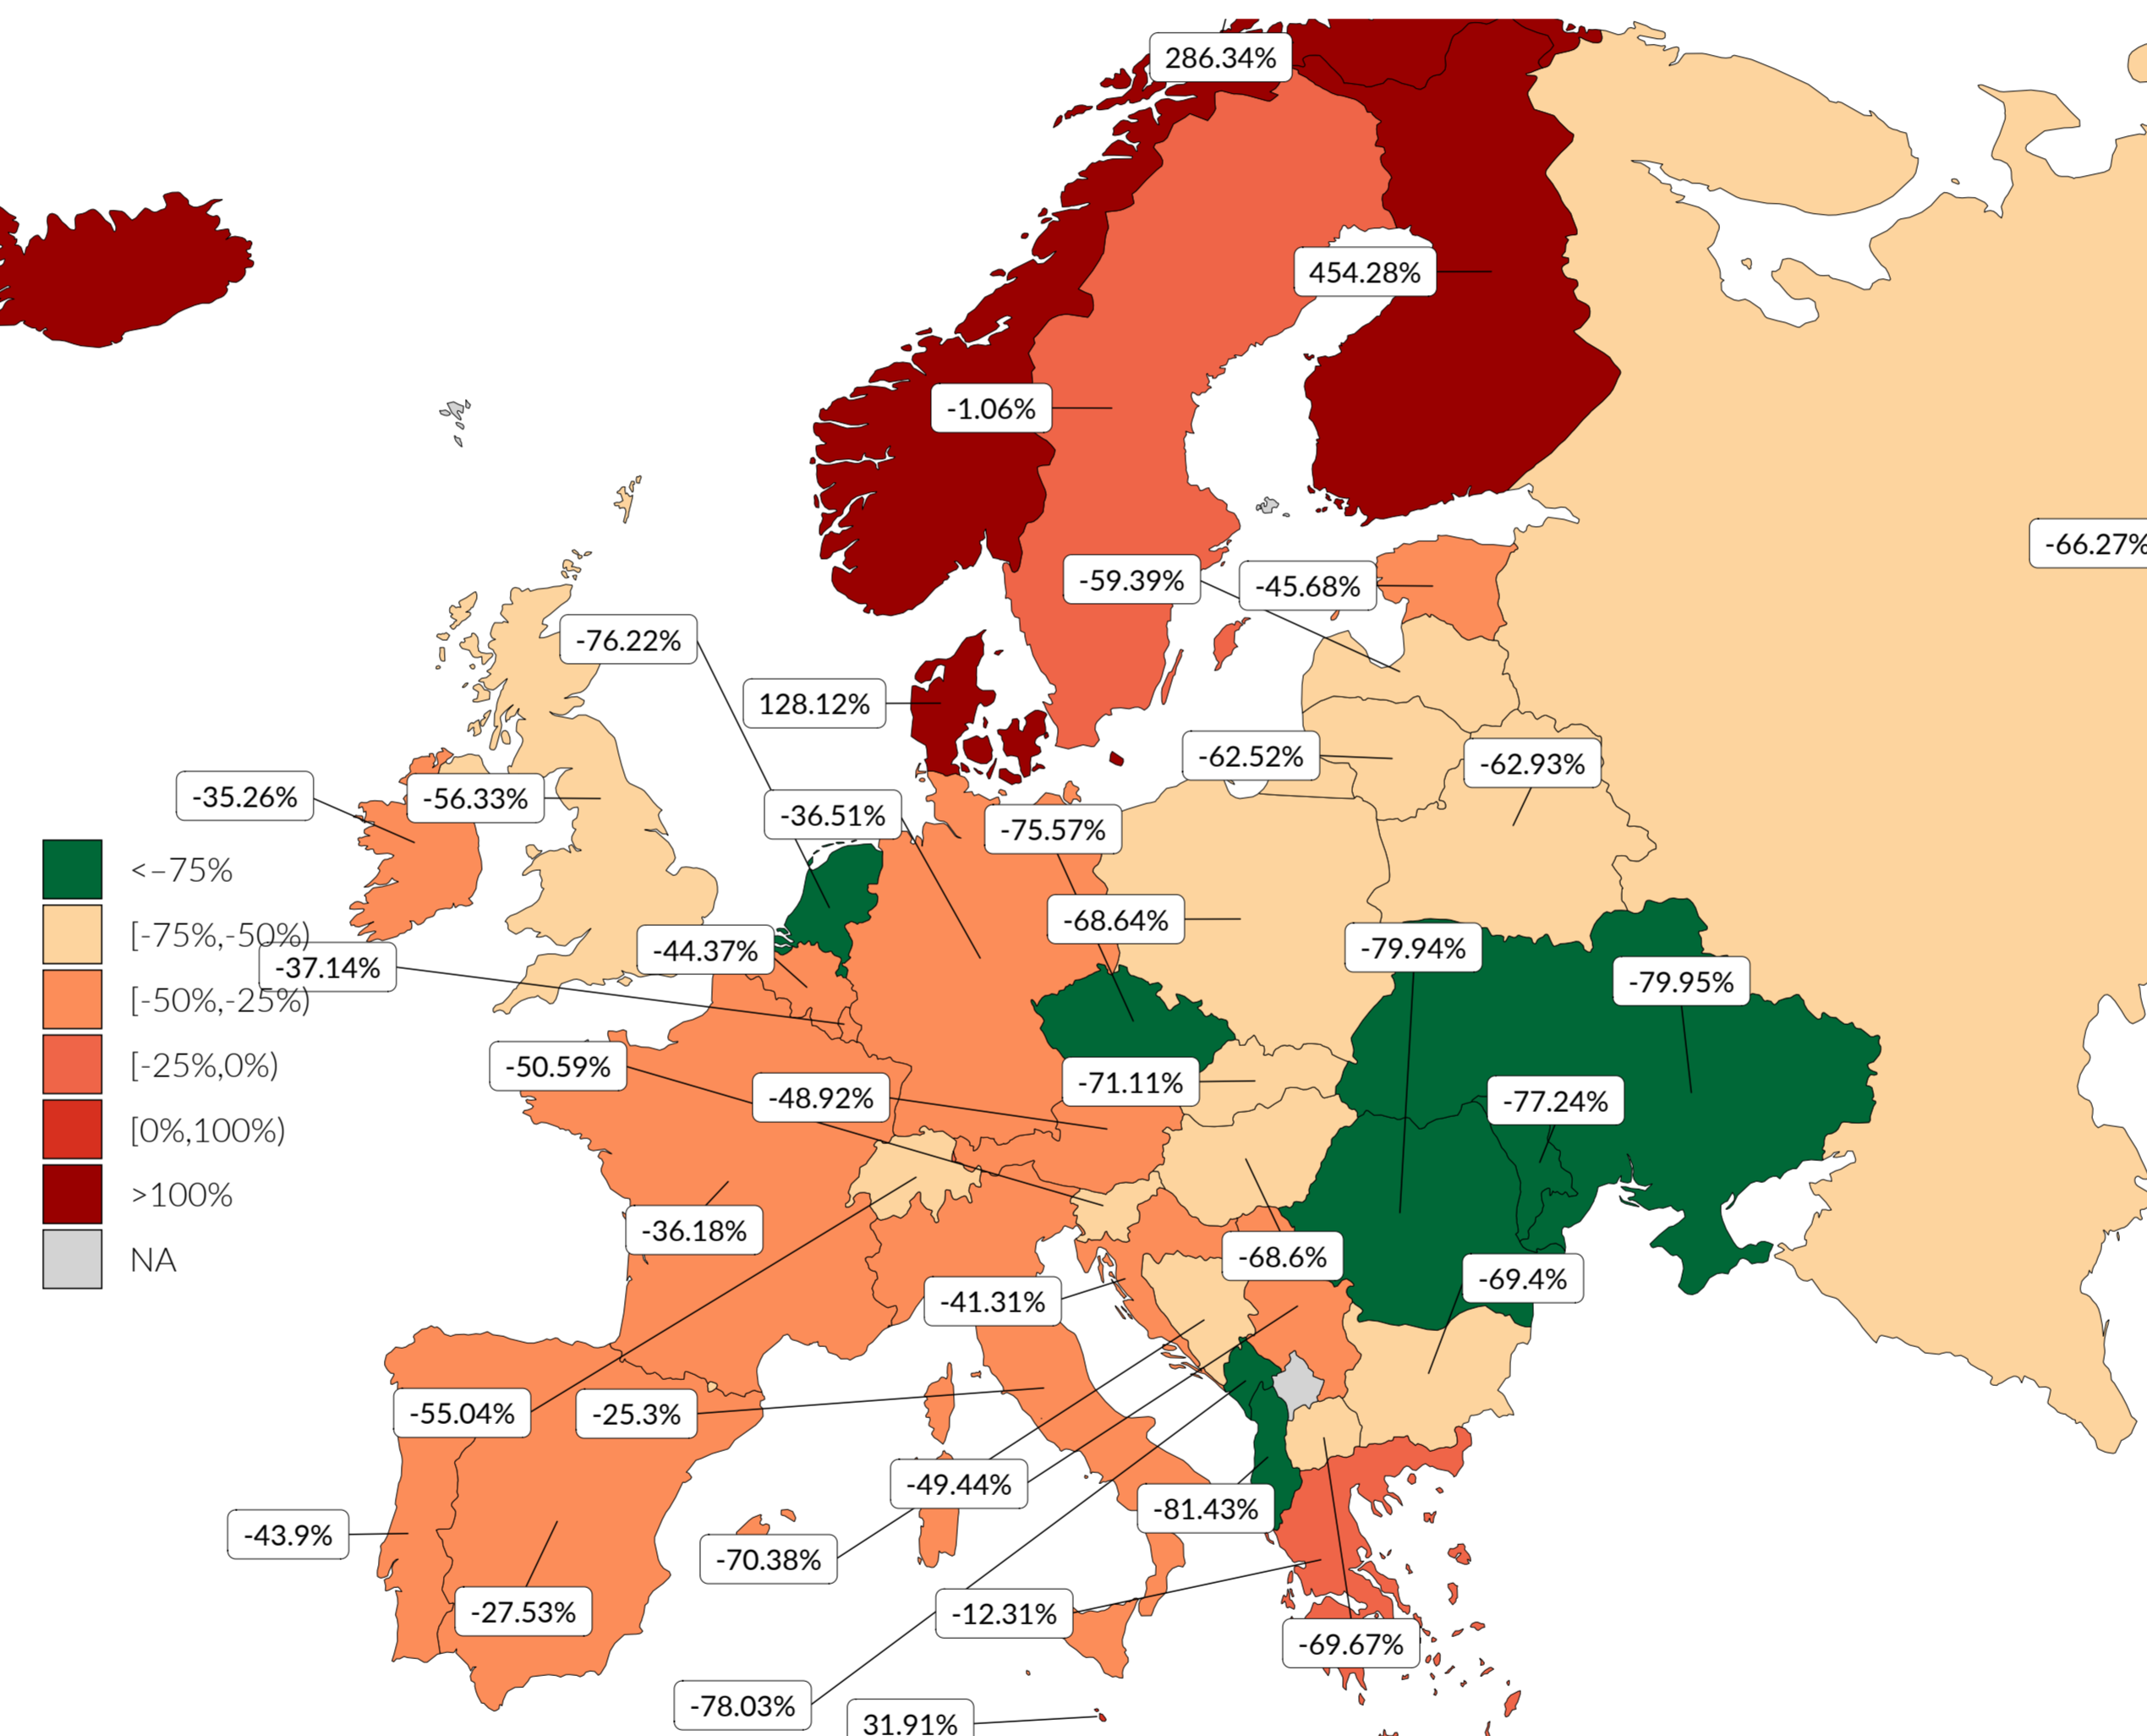

Top 10 European Countries with the Highest COVID-19 Deaths in 2021

Abstract

This poster compares the number of COVID-19 deaths in various European countries in 2021 and 2022. Russia had the highest number of deaths in both years, while France, Germany, and the UK saw a decrease of approximately 36%, 36%, and 56%, respectively. However, in Scandinavian countries such as Norway, Finland, and Denmark, the situation worsened with an increase in the number of deaths between 2021 and 2022. These findings highlight the varying impact of COVID-19 on different countries and the importance of ongoing efforts to control the spread of the virus, particularly in Norway, Finland, and Denmark, where the situation worsened.

The growth rate in COVID-19 deaths from 2021 to 2022

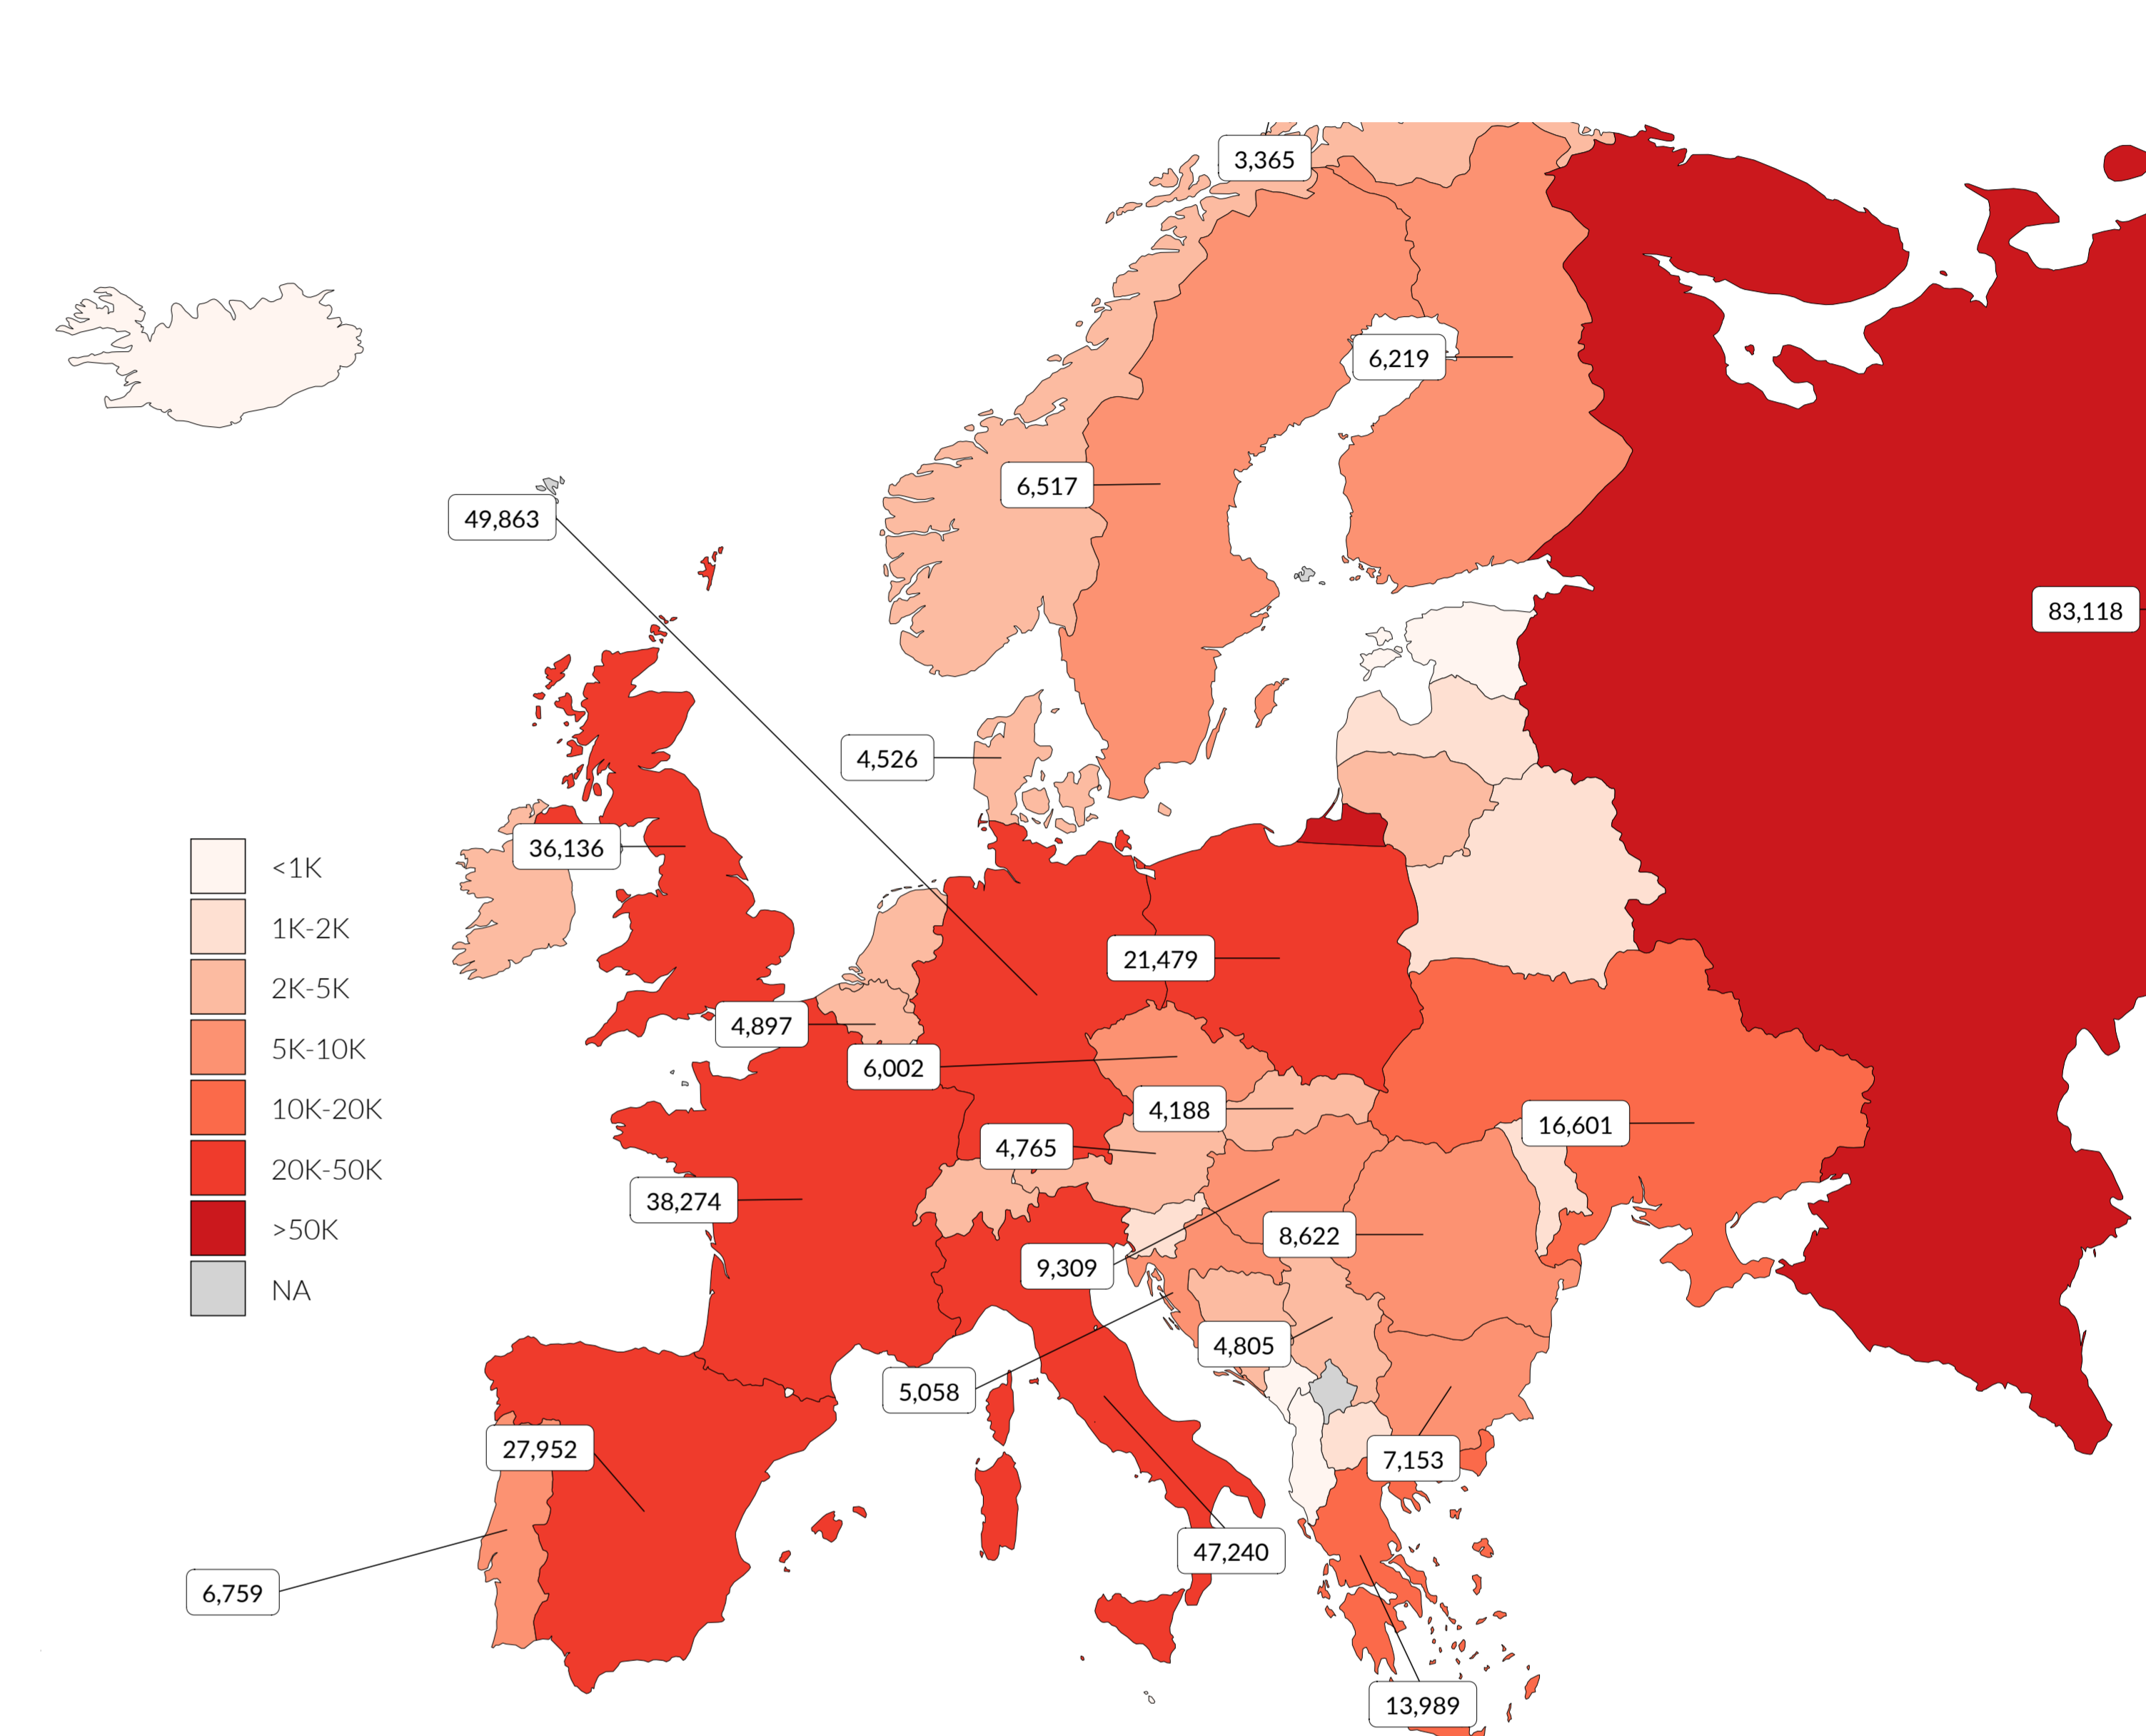

Countries with positive growth from 2021 to 2022

Country	2021	2022	Change rate
Iceland	8	193	2,312%
Finland	1,122	6,219	454%
Norway	871	3,365	286%
Denmark	1,984	4,526	128%
Malta	257	339	32%

Data

Data for this analysis was obtained from the John Hopkins University Center for Systems Science and Engineering (JHU CSSE) COVID-19 dataset, available at <https://github.com/CSSEGISandData/COVID-19>.
